1. MVP Features Checklist (1 page)

Students must list all implemented MVP features.

Example structure:

Feature	Component	Status	Evidence
User login	Backend API	Implemented	Demo video
Model prediction	AI pipeline	Implemented	Screenshot
Dashboard view	Web interface	Implemented	Demo

Guidelines:

- Focus on functional features, not tasks
- Status must be Implemented or Partial
- Each feature must appear in the demo

2. Demo Video (2–3 minutes)

The demo video must clearly show:

1. Problem context (very briefly)
2. System running
3. Main user workflow
4. Key features working
5. Integration between components

Example flow:

- User inputs data
- System processes request
- Model/service runs
- Output displayed

Requirements:

- 2–3 minutes maximum
- All team members must participate in the video.
- Screen recording is sufficient
- Voice explanation preferred but optional
- Format: MP4
- Maximum file size: 100 MB

3. Two-Slide MVP Summary

You must prepare two slides only.

Slide 1 — MVP Overview

Must include:

- What the MVP does
- Key implemented features
- System architecture snapshot

Slide 2 — Learning & Contributions

Must include:

- Key technical challenges
- What the team learned
- Responsibilities of each team member

Example:

Member	Responsibility
Ahmed	Backend API
Sara	ML pipeline
Omar	Frontend
Nada	Integration

4. Live Demo (Supervisor May Request)

Teams must be ready to demonstrate:

- System running locally or deployed
- Core workflow working end-to-end
- Key feature functionality

Supervisors may ask questions about:

- architecture
- implementation decisions

- Limitations

How to Run the Demo Session

When teams present:

1. Each member must present their part
    a. backend
    b. AI model
    c. frontend
    d. integration
2. Supervisor may ask random questions to any member

What This Milestone Ensures

You must demonstrate:

- The system actually works
- The architecture can be realized
- Major risks are already addressed
- The project is feasible for final delivery
